

Congratulations to Shannon Regli for winning the CHED Western Region Award for Excellence in High School Teaching!

Shannon Regli teaches Honors and AP Chemistry at Troy High School in the Fullerton Joint Union High School District in Orange County, CA. After completing her BS in chemistry at Cal Poly, San Luis Obispo, she continued her education in graduate school at UC Irvine. There she studied atmospheric chemistry and conducted field work in northern Alaska on global climate change. She decided that teaching high school was her true passion, though, and she returned to Cal Poly for a teaching credential. She taught two years at a small high school in Templeton, CA, before embarking on a new adventure teaching at the International School of Nido de Aguilas in Santiago, Chile. She moved back to the United States after two years of teaching and traveling throughout South America. Over the past 14 years at Troy High, Shannon has been a coach for Science Bowl, an assistant coach of Science Olympiad, as well as an adviser for ChemClub. She has volunteered with the OCACS Education Committee for the past 5 years, helping with the annual High School Chemistry Examinations. She is happiest in the classroom and loves inspiring her students to study chemistry in college and beyond!

*Join us Saturday, November 7 from 6:00-9:00PM at Stone World Gardens & Bistro to celebrate her achievements and excellence in high school education.*
